

Bowel urgency: an overlooked problem in IBD

MAY 27th, 2022 | h. 2:00 pm CEST

Scientific directors: Silvio Danese, Laurent Peyrin-Biroulet

The return to a normal life should be considered as the ultimate therapeutic goal in IBD. Bowel urgency is a frequent and disabling condition in IBD. This has been mostly investigated in non-IBD conditions. What can we learn from these diseases? How to assess this disorder? What are the non pharmacological approaches that can be used in these patients? These topics will be discussed during this interactive webinar.

FACULTY

Silvio Danese

Professor of Gastroenterology,
Head of Gastroenterology and Endoscopy
