

ULCERATIVE COLITIS: FROM SYMPTOMS TO DISEASE CLEARANCE

MAY
3RD, 2023
6:00 PM CEST

SCIENTIFIC DIRECTORS

Silvio Danese, Laurent Peyrin-Biroulet

Disease clearance is defined as the simultaneous clinical, endoscopic, and histological remission in patients with ulcerative colitis (UC).

Patients with disease clearance experience a significantly lower risk of hospitalization and surgery compared with subjects without disease clearance.

Disease clearance could represent a new treatment target in ulcerative colitis allowing for a greater disease control and a reduced risk of complications.
